

ABSTRACT OF THE DISCLOSURE

The present invention relates to a portal martial arts practice dummy and, more particularly, but not exclusively, to practice dummy for kung fu. The dummy comprises a body and support means, detachably mounted to the body, for detachably securing the body to a floor or a base and supporting the body for use. Said support means comprise a plurality of members which are detachably secured to each other, the body and/or the base, and the basis is hollow for receiving the plurality of detached member storage.
